

Working in Child Care in Alleghany County

The North Carolina Child Care Workforce Survey 2003

As part of the North Carolina Needs and Resources Assessment, a statewide survey of the child care workforce was conducted in the spring and summer of 2003. This study provides comprehensive data on child care providers and on the facilities in which they work. Survey response rates in Alleghany County were 100% (n=9) of center directors, 68% (n=26) of teachers and 100% (n=1) of family child care providers. Detailed information about survey methods and response rates is in the appendix. Totals may not equal one hundred percent due to rounding.

The child care workforce in Alleghany County has experienced improvements in director and teacher education, teacher turnover and the proportion of centers providing paid health insurance while remaining stagnant or suffering losses in paid sick leave. The constant challenge of supporting workforce professional development while raising wages and lowering turnover is clearly at play in Alleghany County as it is across the state. County representatives can take some pride in the positive changes they have made for the workforce and build on these successes as the county continues working on the perennial challenges facing its child care programs and providers.

Child Care Centers

The percentages of responding child care centers by their organizational structure and by their star ratings are shown in Table 1. Organizational categories were collapsed for simplification. For-profit centers included programs ranging from single-classroom facilities consisting of a multi-age group of children and one teacher/director to multi-site facilities enrolling hundreds of children and employing a director, assistant director, lead teachers and assistant teachers. Faith-based, non-profit centers included programs with a Letter of Compliance (GS-110) as well as centers with a star-rated license. Other non-profit centers included non-profit independent centers that were community or board sponsored, non-profit public-school programs and Head Start sites. Programs that could not be easily classified into one of these three groups were combined into a separate group.

Table 1			
Profile of the Responding Centers in Alleghany County (n=9)			
Center License		Organizational Structure	
4 or 5 Stars	22%	For-profit Centers	44%
3 Stars	33%	Faith-based Non-profit Centers	11%
Under 3 Stars*	44%	Other Non-profit Centers	44%
		Other	0%
*Includes 1- and 2-star licensed centers, GS-110 (Letter of Compliance) centers and centers with a temporary or provisional license.			

Centers enrolled a median of 28 children ages birth to five (not including school-agers) and employed a median of 3 full-time and 1 part-time teachers and assistants. Total enrollment

in the responding centers was 259 children, and 44% (4) of the centers had children on their waiting list. Centers with a 4- or 5-star license had a median of 20 children waiting for care, whereas all other centers had a median of 8 children on the waiting list.

Staffing. The child care center staff that participated in the survey represented a wide variety of positions in the early childhood field and worked with children of all ages. Those who completed a director survey held titles such as director (56%, 5), director/owner (33%, 3) and other positions (11%, 1).

As for staff who completed a teacher survey, 69% were teachers or lead teachers and 31% were assistant teachers, teacher’s aides or floaters. Teaching staff typically worked only with children age birth to five (96%).

Wage Scales. Center directors reported wage scales for center teaching staff that included low starting wages and limits on the highest wages paid to teachers and assistants (see Table 2). Assistant teachers and substitute caregivers continued to earn lower wages than other teaching staff. This compares to the following from 2001: a median starting teacher wage of \$6.75 per hour and a median starting assistant teacher wage of \$6.00 per hour.

Table 2	
Pay Scales in Child Care Centers in Alleghany County (n=9)	
	2003
Starting Teacher Wage in Center	\$6.75
Highest Teacher Wage in Center	\$9.00
Pay Increase from Starting to Highest-Paid Teacher	33%
Starting Assistant Teacher Wage in Center	\$6.00
Highest Asst. Teacher Wage in Center	\$8.00
Pay Increase from Starting to Highest-Paid Asst. Teacher	33%

Note: Median wages are reported. Data are based on directors’ reports.

Employment Benefits. Employment benefits offered by centers in Alleghany County are shown in Table 3. These benefits compare to 33% of centers in 2001 that offered fully paid health insurance and to 50% that offered paid sick leave. Among teaching staff that had ever worked over 40 hours per week (50%), 8% said that their centers paid them time and a half for the overtime hours that they worked. Federal wage and hour law requires that non-exempt workers such as child care providers receive time and a half for overtime hours.

Table 3
Employment Benefits in Child Care Centers in Alleghany County (n=9)

	2003
Fully Paid Health Insurance	44%
Partially Paid Health Insurance	0%
Free Child Care	0%
Reduced Child Care Fee	29%
Parental Leave	33%
Paid Sick Leave	44%
Paid Vacation	89%
Paid Holidays	100%
Paid Retirement Benefits	56%

Family Child Care Homes

The Alleghany County family child care provider responding to this survey had been in business for 8 years. The provider worked without help from a paid assistant. Her home offered holiday care but did not offer any of the following: evening care, overnight care, drop-in care and care for sick children. Total enrollment as of January 2003 was 5 children ages birth to five.

Earnings and Expenditures. The family child care provider's gross monthly earnings are based on child care tuition fees, subsidy payments and Child and Adult Care Food Program reimbursements for January 2003. Expenditures included items such as food, toys, substitute care, advertising, training fees, diapers, crafts, transportation, supplies, field trips and gifts for the children. Home occupancy costs such as utilities, home improvement or repairs, cleaning and rent or mortgage payments are not included. The responding provider did not give sufficient information about her earnings and expenditures to report these data here.

Table 4
Earnings and Expenditures of Family Child Care Homes in Alleghany County (n= 1)

	2003
Total Monthly Earnings (median)	\$1,234
Total Monthly Expenditures (median)	no data
Hours Worked per Week (median)	no data
Net Hourly Income (median)	no data

Benefits. Family child care providers usually work alone or with the help of an unpaid or underpaid family member. Child care tuition did not cover the provider's vacation time or days when the provider was sick. These measures help identify the degree to which providers run their child care programs as a business designed to meet the providers' personal and professional needs.

Profile of the Child Care Workforce

The child care workforce in Alleghany County, as in North Carolina, is overwhelmingly female and includes a large proportion of workers who have children of their own (see Table 5). Among the teaching staff that responded, 15% indicated that their children were enrolled in the centers where they work. Of these respondents, none received free or reduced child care from the center¹; 60% received government assistance to help them pay for child care (note: respondents can receive both kinds of assistance).

Many people working in the early childhood field face severe economic challenges that affect themselves and their families. For example, 27% of the teachers and assistants that responded said that they had no health insurance coverage from any source. Additionally, 30% of teachers and assistants had received some type of public assistance (e.g., Medicaid, Food Stamps, TANF) in the last three years. This compares to 2001 in which 42% of teachers and assistants and 0% of family child care providers had no health insurance from any source and 41% of teachers and assistants and 0% of family child care providers received one or more forms of public assistance in the past three years.

Table 5
Demographic Profile of the Child Care Workforce in Alleghany County

	Center Directors*	Teachers and Assistants	Family Provider*
	2003	2003	2003
Median Age	47	37	56

At Least One Child 0-18 Years Old	78%	46%	0%
Annual Family Income Below \$20,000	0%	40%	0%

*Data are based on 9 center directors and 1 family provider.

¹ Item Response Rate: 78%

Education of the Child Care Workforce

Child care provider education is a critical factor influencing children's early learning opportunities. This section profiles Alleghany County providers' educational attainment and aspirations as expressed in the current survey. See Table 6 for education data on center directors (directors, director/owners and assistant directors), family child care providers, teachers (teachers and lead teachers) and assistant teachers (assistant teachers, teacher aides and floaters). Gains in degree-earning providers are a positive sign that the workforce is growing to meet the needs of young children. Center directors have completed higher levels of education than teachers and family child care providers, though all groups do not match the minimum education requirements for teachers and administrators in public elementary, middle and high schools. Four percent of teachers (but none of the directors and family child care providers), however, have a college degree in fields other than early childhood education or child development and have taken at least one course in the field.

Alleghany County child care providers have a strong interest in working toward higher levels of education. As shown in the tables, many directors, teachers and family child care providers had completed college courses. Furthermore, 42% of the teachers and assistants and all of the responding family child care providers said that they were currently taking courses leading to a degree or credential in the early childhood field. Among all of the responding teachers and assistants, 29% were working towards a two-year degree or higher. Of the survey respondents who were not taking courses, 20% (1) of the directors and 50% of the teachers and assistant teachers that responded said they were interested in doing so.

In 2003, 56% (5) of directors and 35% of teachers and assistants indicated that they had attained an Associate, Bachelor's or Master's Degree in some field.² In comparison, 17% of directors, 50% of family child care providers and 13% of teachers and assistants in 2001 had earned an Associate, Bachelor's or Master's Degree in some field.

² These percentages may not equal the sum of the percentages in Table 6 due to rounding.

Table 6

Education of the Center Directors, Family Child Care Provider and Teachers in Alleghany County

	Center Directors*	Teachers and Assistant Teachers	Family Provider*
	2003	2003	2003

*Data are based on 9 center directors and 1 family provider.

**Percentages were drawn from the survey respondents who were not currently taking courses.

Earnings of the Child Care Workforce

Child care provider earnings in Alleghany County remain low (see Table 7). The median self-reported wage of child care teachers and assistants in Alleghany County does not compare favorably to the starting wage of public school teachers (\$14.58 per hour). Child care center directors' median self-reported wage barely competes with that of the public school teachers despite the added responsibility of running a business and working year round. Some child care providers (6% of teachers and 25% of assistant teachers) said that they worked another paid job in addition to their job as a child care provider. The median number of hours worked in these additional jobs was 16 for teachers. In 2001, the median director salary was \$11.08 per hour; in 2003, it decreased to \$10.50 per hour. In 2001, the median teacher salary was \$6.33 per hour; in 2003, it increased to \$7.50 per hour.

Table 7

Self-Reported Earnings of the Child Care Workforce in Alleghany County

	Center Directors* 2003³	Teachers and Assistant Teachers 2003	Family Provider* 2003
Salary Supplement Included

Salary Supplement Not Included			
Highest Hourly Earnings (90th Percentile)	\$15.45	\$10.00	no data
Median Hourly Earnings (50th Percentile)	\$10.50	\$7.50	no data
Lowest Hourly Earnings (10th Percentile)	\$9.25	\$6.00	no data

*Data are based on 9 center directors and 1 family provider.

Professional Support for the Child Care Workforce

Early childhood research has shown that higher education and compensation of child care providers can lead to positive outcomes for children. Programs such as the T.E.A.C.H. Early Childhood® Project and salary supplements have addressed the educational and financial needs of child care providers while lowering staff turnover. At the program level, child care centers offer staff opportunities to develop their teaching skills and professionalism through coursework and by creating a supportive work environment. The workforce survey included a number of questions on these professional support topics.

The T.E.A.C.H. Early Childhood® Project. According to center directors, 56% (5) of the centers in Alleghany County had at least one staff member that had received a T.E.A.C.H. scholarship. A proportion of teachers and assistant teachers (20%) said that they had received a T.E.A.C.H. scholarship. Among the child care providers that responded, 100% (9) of center directors, 100% of teachers and the family child care provider had heard of the T.E.A.C.H. Early Childhood® Project.

Salary Supplements. Among Alleghany County teachers and assistant teachers, 27% received a Smart Start funded salary supplement. The median supplement amount was \$415 per year. Of those receiving the supplement, 100% said it encouraged them to continue in the child

³ Item Response Rate: 67%

care field. Additionally, 44% (4) of directors received a supplement at a median of \$600 per year. Finally, the responding family child care provider had not received a supplement.

Other Center-Provided Support. Child care centers can support the professional development of staff without creating a significant financial burden on their programs. Seven key types of professional support that centers can provide staff are an orientation, written job descriptions, written personnel policies, paid education and training expenses, paid breaks, compensatory time for training and paid preparation or planning time (see Table 8). Among the responding centers, 88% (7) offered at least five of these types of support and 0% offered three or fewer. Providing a professional work environment may be a low-cost means for centers to prevent staff turnover. By comparison in 2001, 67% of centers offered at least five types of support and 17% offered three or fewer.

	2003
Orientation	100%
Written Job Description	100%
Written Personnel Policies	100%
Paid Education/Training	67%
Paid Breaks	89%
Time Off for Training	56%
Planning/Preparation Time	89%

Experience and Turnover of the Child Care Workforce

Young children need experienced, well-educated teachers with whom they can form close attachments over time. Alleghany County has a combination of seasoned child care professionals who have remained with their current programs for years and of less-experienced providers who have either just begun in the field or in a new child care program (see Table 9). Among survey respondents median experience in the child care field was 10.2 years for directors, 5.5 years for teachers and assistants and 8.0 years for the family child care provider. In 2001 by comparison, directors had been in the workforce for 10 years, teachers and assistants for 3.0 years and family child care providers for 2.9 years.

Table 9**Child Care Workforce Experience in Alleghany County**

	2003
Teachers Years in Current Center	2.0
Teachers < One Year in Current Center	24%
Teachers Years in Child Care Field	6.3
Assistant Teachers Years in Current Center	2.3
Assistant Teachers < One Year in Current Center	25%
Assistant Teachers Years in Child Care Field	2.5
Directors Years as Director in Current Center (n=9)	4.7
Directors Years in Child Care Field (n=9)	10.2
Family Child Care Provider Years as FCC Provider (n=1)	8.0

The current survey included two measures of turnover: (1) for center-based teacher turnover, the percentage of child care teachers who left their centers during the previous year and (2) for individual directors, teachers and family child care providers, the percentage of workers who are planning to leave the child care field in the next 3 years (see Table 10). As a proportion of all full-time teachers and assistants, 7% left their centers during the previous 12 months.⁴ Turnover rates within centers ranged from 0% to 100% of full-time staff. Of the centers that responded, 86% (6) had no full-time staff turnover during the previous year while none of the centers had turnover above 100% of current full-time staff. In 2001, 22% of full-time teachers and assistants left their centers during the previous 12 months.

⁴ Turnover data reported by center directors with less than one year of employment in the centers were not included in the turnover calculation.

Table 10
Child Care Workforce Turnover in Alleghany County*

	2003
Full-Time Teacher and Assistant Teacher Turnover	7%
Full-Time Teacher Turnover	6%
Full-Time Assistant Teacher Turnover	8%
Part-Time Teacher and Assistant Teacher Turnover	17%
Part-Time Teacher Turnover	33%
Part-Time Assistant Teacher Turnover	11%
Teachers Leaving the field in 3 Years	11%
Assistant Teachers Leaving the field in 3 Years	25%
Directors Leaving the Field in 3 Years	0%
Family Child Care Provider Leaving the Field in 3 Years	0%

*Turnover and director data are based on 9 respondents.

Survey respondents planning to leave most commonly indicated that higher earnings would encourage them to stay. Different motivators among the groups stemmed from the unique roles and responsibilities of each group, though all three were generally interested in additional support (e.g., increased program funds, better employment benefits and more substitute teachers), for the work they do.

More at Four in North Carolina

More at Four is a statewide pre-kindergarten program for at-risk four-year olds. The primary purpose of More at Four is to ensure that these children can access the high quality child care that will prepare them to succeed when they enter kindergarten and beyond. Child care programs that participate in the initiative provide high quality early childhood services on which the More at Four program has been built. Participating facilities can include DCD-licensed child care centers and preschools, public schools and Head Start programs. (Only DCD-licensed sites are included in this study.) More at Four requires that participating classrooms in these facilities meet specific program criteria based on early childhood curriculum, teacher qualifications and child-teacher ratios. (More information about More at Four is available at www.governor.state.nc.us.)

All DCD-licensed child care centers that were participating in More at Four as of March 2003 were sent surveys as a part of this study (230 More at Four sites with 2,715 teachers). Both center directors and all teachers in the programs were asked to respond to the survey. The number of directors of More at Four programs was reduced to 201 when phone calls to centers revealed that several directors managed more than one More at Four site. The total number of More at Four directors who completed a survey was 165 for a response rate of 82%. More at Four teacher data in this report comes only from the 447 teachers working in More at Four programs who said that they have at least one More at Four participating child in their classroom.

A response rate for More at Four teachers cannot be determined without knowing which teachers in the original survey sample were More at Four teachers and which simply worked at a program that More at Four children attended. Overall teacher response in More at Four sites was 57% of total teachers in these programs, which suggests that the response rate of More at Four teachers was similarly high. The survey data on More at Four sites and providers were collected for the first time in the current study, so this report serves as a baseline assessment of several More at Four population variables.

A Profile of Participating More at Four Sites in North Carolina

The responding More at Four programs were in 65 counties across the state. They represented the full mix of programs participating. Of the More at Four sites that responded, 96% said that the teachers in their four-year old classroom used one of the More at Four approved curricula. Of these curricula the Creative Curriculum for Early Childhood was the most common by far (84%), and the next most common curriculum in use was the Bright Beginnings Pre-K Curriculum (11%).

Many of the responding More at Four sites indicated that they did not yet meet all of the More at Four criteria. The criteria presenting the greatest challenges included having at least one lead teacher with the B-K/Preschool add-on teacher licensure (58% did not meet this criterion), paying teachers with the B-K/Preschool add-on teacher licensure rates equal to public school teachers (66% did not meet this criterion) and having a director with a Level III Child Care Administration Credential (52% did not meet this criterion). Site directors indicated that their programs needed help in the following areas to meet standards: funding to offer better teacher pay and benefits (69% needed help with this), funding to cover income lost due to reduced class size (48%) and finding teachers who meet More at Four qualifications (45%). Of those who indicated “teachers who meet qualifications” as an area in which help was needed, 84% had teachers who received a scholarship from the T.E.A.C.H. Early Childhood® Project.

More at Four in Alleghany County

In Alleghany County there was 1 director working in a licensed center that was a More at Four site as of March 2003. The criteria presenting the greatest challenge to the center was having a 4- or 5-star license. The director indicated that her program needed help with funding to improve or restructure the classroom environment and with training on the use of approved curricula. The director also indicated that the center would be willing to serve additional children through More at Four.

Appendix

Survey Methods and Response Rates

Child care programs selected for survey participation were drawn from January 2003 licensing reports of the North Carolina Division of Child Development. Programs that served only school-age children or that provided care only during the summer months were not included in this study. In Alleghany County survey packets were mailed to 100% of the licensed centers (n=10) with enough questionnaires for 10 directors and 39 teachers and to 100% of the licensed family child care homes (n=1). Center packets included a cover letter, questionnaire and postage-paid envelope for the director; cover letter, questionnaire and postage-paid envelope for each teacher and raffle tickets for the director and teachers. The family child care provider received a cover letter, a questionnaire with postage-paid envelope, and a raffle ticket. As a sign of thanks and an incentive for participation, window stickers with an early childhood slogan were also included in the survey packets. In addition, everyone who returned a completed questionnaire and raffle ticket was entered in county- and state-level raffles for prizes.

The written questionnaires used in this survey were based on forms for child care center directors, teachers and family child care providers previously created and used by the authors of this study. The questionnaires were modified to include items relevant to child care centers participating in More at Four and to the Performance Based Incentive System created by the North Carolina Partnership for Children.

Staff followed the initial survey mailing with a reminder postcard, repeated phone calls and survey mailings and site visits (only in counties with low response rates) to child care centers and to the family child care home to ensure high survey response rates. Study representatives also maintained regular contact with local child care partnerships and resource and referral agencies to encourage involvement at the local level. Upon receipt of center director and family child care provider surveys, staff called survey participants to clarify responses on the questionnaires to ensure the accuracy of the information collected.

The survey sample of 10 Alleghany County centers was reduced to 9 when phone calls revealed that one center had closed, was an extension site of other centers or was one of multiple Head Start sites supervised by one area coordinator. Based on director reports, the adjusted teacher count was 38. A total of 9 director surveys, 26 teacher surveys and 1 family child care provider survey were received. This yielded a response rate of 100% for directors, 68% for teachers and 100% for family child care providers. The goal was to obtain response rates of 70% for directors, 50% for teachers and 70% for family child care providers to ensure strong representation of the county's child care workforce as a whole. Response rates below these goals are not necessarily inadequate but do require a more careful interpretation of the study findings.

The majority of response rates (87%) to individual questions were above 80%. Items with significantly low response rates have been noted in the report.

Acknowledgements

The authors thank:

The N.C. Division of Child Development and More at Four for providing the funding for this project.

The FPG Child Development Institute for inviting Child Care Services Association to collaborate with them on the 2003 Early Childhood Needs and Resources Assessment, of which this study is a part.

The Smart Start partnerships and child care resource and referral agencies for helping us obtain high participation rates in their communities.

The child care providers who participated in the survey and who have dedicated themselves to providing quality care for young children across the state.
